## GCS/Detex – Proxi Pen

### PRODUCT INFORMATION

#### **Proximity-based Electronic Guard Tour Verification**

Detex introduces the latest innovation in guard tour verification technology: the new GCS ProxiPen Data Acquisition Unit and WinDAU reporting software. ProxiPen's data points are Radio Frequency Identification (RFID) tags, which the ProxiPen senses and reads automatically whenever they come into its reading range. You don't need to actually touch the RFID tag to get a quick, accurate reading; just get close!

This means that ProxiPen can read a tag even if it is wet, frosty, dirty, greasy, or painted over. In fact, ProxiPen's RFID tags may be concealed behind wallpaper, sheetrock, plaster, paneling, mirrors or any other nonmetallic surface; a real plus in applications where aesthetics or vandalism are considerations.

**Toughness plus advanced technology – but easy to use.** ProxiPen is compact, lightweight and easy to use since it has no external controls. Correct data readings are confirmed by visible and audible signals. Its electronics are sealed in a tough polycarbonate housing, making the reader completely waterproof and resistant to heat, shock and hydrocarbons.

**Change your own battery.** With its low power consumption, ProxiPen delivers 50,000 data readings from one "AA" battery, which you can change yourself without tools. Any stored data is preserved in non-volatile memory. To discourage tampering, the ProxiPen disables itself if the battery is removed for longer than 10 minutes and records the date and time the battery was removed. The ProxiPen is then easily reset with the WinDAU software.

**The price is right!** The ProxiPen kit includes everything you need: a ProxiPen, a data transfer unit, 33 RFID tags, the WinDAU software, and an incident book – all at an incredibly competitive price. And the WinDAU software can be used with other GCS data acquisition hardware, including the popular Escorte system – in combination with the ProxiPen if so desired.

### KEY FEATURES/COMPETITIVE ADVANTAGES

#### **Wand**

- Proximity reader device
- 3 year warranty on wand
- Downloads directly to computer
- Completely waterproof
- Runs off standard AA batteries
- Incident book that tracks up to 10 incidents

#### **Tags**

- Lifetime warranty on tags
- Tags can be buried in a wall up to an inch thick
- Direct contact with tag is never required, will read within one inch
- Never have to worry about rust, corrosion, frost, water, paint, or making flat contact between reader and tag

#### **Software**

- Software tracks all important information
- Supports multiple Tours
- Reports for tracking incidents and tours
- Software gives “Low Battery” warning when collection unit is downloaded
- Modem can be used at remote locations to upload tour information to a central location.

#### **Enterprise Edition**

- Adds the ability to sort and define custom reports
